

GW2208+ Product Manual

tosunai.com

What Are the Advantages of GW2200+?

- **Multi-Channel Technology**
The GW2200+ is a multi-channel device, meaning it can handle multiple data streams simultaneously. This is particularly useful in applications where data is collected from multiple sensors or sources at the same time.
- **Gateway Functionality**
The GW2200+ acts as a gateway between different communication protocols. It can receive data from one protocol (e.g., CAN bus) and convert it into another protocol (e.g., Ethernet) for transmission to a central system.
- **Multi-Channel Support**
The device supports multiple channels of data collection, allowing for simultaneous monitoring of various parameters or components within a system.
- **High Performance**
The GW2200+ is designed for high-speed data acquisition and processing, ensuring that critical information is captured and analyzed in real-time.
- **Cost Efficiency**
By consolidating multiple functions into a single unit, the GW2200+ offers a cost-effective solution for complex data acquisition systems.
- **Seamless Software Integration**
The device is compatible with a wide range of software applications, making it easy to integrate into existing data management and analysis workflows.

- **Rate and Data Length Adaptation**

—

- **Relay & Load Expansion**

How to Use the GW2208+ Device?

Contents

2. General Information

2.1 Bus Data Collection and Analysis

- Bus Statistics
- Database
- Message Playback
- Message Transmission

- Message Monitoring
- Graphical & Numerical Display

2.2 Bus Simulation
